

New Special Issue on
Pattern in Solar Variability, their Planetary Origin and Terrestrial Impacts
Editors: N.-A. Mörner, R. Tattersall & J.-E. Solheim
Pattern Recognition in Physics, 2013

Planetary–Solar–Terrestrial Interaction

19

eminent scientists

join in concluding that the planets
drive the solar variability and its effect on the Earth

this also implies
that we will soon be in a **New Solar Minimum**
(the descending trend has already commenced)
that is a new period of severe climate
and **Little Ice Age** conditions
as were the case during the past minima

by this all the fear of disastrous warming
should be gone

The Preface, 12 separate papers and a General Conclusion
are accessible (free of charge) at:
